

WHAT-IF SCENARIO ANALYSIS

Valencia Operations · Sensitivity · 2026-07-22

THE REQUEST

Asked: "Set revenue growth to 8 percent"

Parsed as: You want to set Revenue to 0.08.

ASSUMPTIONS

Driver	Base assumption	Scenario
Revenue	12% YoY growth	8% YoY growth

BASE VERSUS SCENARIO

Line	Base	Scenario	Change	%
Revenue	8,490,872	8,187,627	-303,245	-3.6%
COGS	3,549,185	3,422,428	-126,757	-3.6%
Gross Profit	4,941,688	4,765,199	-176,489	-3.6%
Personnel Cost	1,732,250	1,732,250	+0	+0.0%
Marketing Spend	534,000	534,000	+0	+0.0%
IT Infrastructure	270,000	270,000	+0	+0.0%
R&D Expense	1,863,247	1,863,247	+0	+0.0%
Total OpEx	4,399,497	4,399,497	+0	+0.0%
Operating Profit (EBIT)	542,191	365,702	-176,489	-32.6%

ANALYSIS

Key takeaways

- EBIT changes by -176,489 (-32.6%), from 542,191 to 365,702.
- Operating leverage: revenue moves -3.6% but EBIT moves -32.6%, about 9 times larger, because the cost base is largely fixed.
- Lines that moved: Revenue, COGS. Lines held flat: Personnel Cost, Marketing Spend, IT Infrastructure, R&D Expense.

This is a single-driver sensitivity: revenue growth was reduced from the base assumption of 12 percent annually to 8 percent, with all other model inputs held unchanged.

The direct consequence is a revenue shortfall of 303,245 euros over the forecast horizon, representing a reduction of roughly 3.6 percent relative to the base plan total of 8,490,872 euros. The more significant impact falls on EBIT, which declines by 176,489 euros, or approximately 32.5 percent of the base EBIT of 542,191 euros. That disproportionate drop reflects the operating leverage embedded in the model: costs

are largely fixed relative to the revenue reduction, so a relatively modest top-line miss translates into a much larger compression of profit.

One important limitation to note: the model held all other assumptions constant, meaning cost structures, pricing, headcount, and any variable cost lines did not adjust in response to the lower growth environment. In practice, a sustained reduction in growth would likely prompt management actions on the cost side, and may also carry implications for working capital or investment plans that this sensitivity does not capture. The EBIT impact shown here should therefore be read as an upper-bound estimate of the downside under this revenue assumption.

Assumptions held constant. No cross-driver assumptions were held constant for this scenario.
